

Platelet Rich Plasma (PRP) Therapy

PRP is relatively new natural anti-aging treatment. There are no artificial substances or medicines injected into your body.

The process involves injecting your own platelet rich plasma into the problem areas to stimulate a natural healing response by creating Elastin and Type 1 Collagen.

It is a regenerative treatment rather than a corrective treatment. Results can take up to three to four weeks.

PRP can be used to treat pigmentation, wrinkles, scar tissue, skin ulcers, certain types of hair loss, stretch marks and sagging skin – especially post pregnancy.

For best results it is recommended to have three treatments at four-weekly intervals followed by six-monthly maintenance treatments.

As it is your own plasma with no artificial substances being injected the risks and side effects are minimal.

Book now for a pre PRP consultation at the Glasgow Private Clinic.
